

Advanced Dentistry of Spring

Stephen Glass, DDS

Experienced General Dentist

Dr. Stephen Glass recently chatted with a confident, young man sitting in his dental chair. As the patient talked about his graduation from college and plans for the future, Dr. Glass couldn't help but flash back on this same patient as a gap-toothed grade-schooler of fifteen years earlier squirming through his dental exam, then as the teenager pushing past his shyness to share a joke with his family dentist, and finally as the nervous high school graduate who, just four years earlier, had told him about the college scholarship he'd landed and his anxiety on leaving Spring for the first time.

The fifteen years had flown by for both of them. And this young man had come to trust the dentist who cared not just for his oral health but for the oral health of his entire family—from his parents to his siblings. "That's the best part about a family practice," Dr. Glass said. "I'm blessed to watch these kids grow up, to watch their parents reach the empty nest and retirement years, and soon I'll be caring for a whole new generation."

Know-You-By-Name Service

Because Advanced Dentistry of Spring is a dentist-owned and operated practice, not a corporate conglomerate, patients know that when they come in, even if it's just for a routine cleaning, they'll see their own dentist, not a new face each time. And because Dr. Glass understands his patients don't want to become comfortable with him only to be referred out to a specialist, he does his best to meet all their dental needs under one roof, where they're comfortable and everybody knows them by name.

Cosmetic and Implant Dentistry

Whether Dr. Glass' patients are considering cosmetic dentistry or need to replace a compromised tooth with an implant; whether they need orthodontics, laser gum therapy, a same-day crown, or lifelike custom dentures, they can get it all taken care of at Advanced Dentistry of Spring.

Cosmetic dentistry ranges from tooth whitening, crowns, and veneers to complete smile makeovers. If you want straighter teeth but don't want to go the tin grin route, Dr. Glass offers Invisalign clear tooth aligners and PowerProx six-month braces.

Custom Dentures

Whether you're missing one tooth or several; whether you have compromised teeth that needs to be extracted then replaced or have been missing teeth for some time, Dr. Glass can place permanent dental implants that will anchor to your jaw to look identical to your existing teeth and restore full biting function to your mouth. He can even secure your denture into place with these same titanium screws anchored to your jaw, so no one will know you're wearing dentures but you.

Advanced Dentistry of Spring includes the latest, cutting-edge technology including in-house, 3-D cone beam imaging, laser gum therapy, laser scanners, same-day CAD/CAM crown technology, intraoral cameras, digital impressions, and Isolite technology which removes moisture and illuminates your mouth while Dr. Glass works. He's now accepting new patients at 7000 Louetta Road in Spring.
